

ABSTRACT

The present invention provides an indoor unit of an air conditioner, which is capable of improving the mounting accuracy between a front grill and a movable panel. An indoor unit (2) of the air conditioner comprises a main body casing (42), a front grill (60),
5 a second panel (72), a driving machine, and an opening and closing mechanism (61). The front grill (60) is provided forward of the main body casing (42) and includes a first intake port (27). The second panel (72) is capable of moving so as to open and close the first intake port (27). The driving machine is provided in the main body casing (42), and generates a driving force to move the second panel (72). The opening and closing
10 mechanism (61) is provided at the front grill (60), and moves the second panel (72) by the driving force of the driving machine to open and close the first intake port (27).
